

IN THE CLAIMS:

Kindly replace the claims of record with the following full set of claims:

Claim 1 (Currently amended): A method of providing a display for a graphical user interface in which a user may define a selected point on a subject image, the method comprising the steps of:

- (i) displaying the subject image;
- (ii) displaying an enlargement of the subject image in response to a user selection of a desired point, the desired point and a point[[,]] determined from an area associated with said user selection[[,]] on which said enlargement is based, wherein said determined point is associated with a center of said area; and
- (iii) displaying upon said enlargement[[,]] said determined ~~a point upon which said enlargement of the subject image is based~~ as a first co-ordinate parameter.

Claim 2 (Currently amended): A method according to Claim 1 further comprising the step of:

- (iv) displaying a reduction of a previous enlargement of the subject image, wherein steps (iii) and (iv) are done in response to a single user input.

Claim 3 (Currently amended): A method according to Claim 1 further comprising the step of:

displaying a further enlargement of a previous enlargement of the subject image in response to a next user selection, wherein said further enlargement is based on a point determined as a center of an area associated with ~~from~~ said next user selection.

Claim 4 (Cancelled):

Claim 5 (original): A method according to Claim 1 wherein a reduction of a previous enlargement of the subject image is displayed in the same scale as the subject image prior to enlargement.

Claim 6 (Currently amended): A method according to Claim 1 further comprising the step of:

returning a second point, in response to a user selection, as a second co-ordinate parameter.

Claim 7 (Currently amended): A method according to Claim 6 further comprising the step of:

performing a calculation to determine the distance between the first and second co-ordinate parameters.

Claim 8 (original): A computer program comprising instructions for performing a method according to Claim 1.

Claim 9 (original): A computer-readable storage medium having recorded thereon data representing instructions for performing a method according to Claim 1.

Claim 10 (original): Apparatus having a display, a processor and a user input device wherein the processor is programmed to perform a method according to Claim 1.

Claim 11 (Previously presented) A method according to Claim 7 wherein the step of performing a calculation further comprises:

determining distances between the first and second co-ordinate parameters as an actual distance that can be traversed to connect the first and second co-ordinate parameters.

Claim 12 (previously presented): A method according to Claim 11 wherein the first and second co-ordinate parameters are a pair of points on a map and the determination of actual distance includes at least one permissible travel route between the pair of points on the map.

Claim 13 (Currently amended): A method selecting points on a graphical user interface of a display comprising:

displaying a subject image;

enlarging the subject image in response to selection of an area about a desired point on the subject image and displaying said desired point on said enlarged image;

determining and displaying a point upon which the enlarged image is based, said point being determined as a center of said area; and

identifying the determined point ~~as selected as displayed on the enlarged image of the subject image~~ as a first co-ordinate parameter.

Claim 14 (Currently amended): A method according to Claim 13 further comprising:

displaying a reduction of the enlarged image following identifying the point selected in response to a single user input.

Claim 15 (Currently amended): A method according to Claim 13 further comprising the step of:

displaying a further enlargement of the enlarged image in response to a next user selection on said enlargement.

Claim 16 (Cancelled):

Claim 17 (Previously presented): A method according to Claim 13 further comprising the step of:

determining and returning a second point based on a user selection as a second co-ordinate parameter.

Claim 18 (Currently amended): A method according to Claim 17 further comprising the step of:

performing a calculation to determine the distance between the first and second co-ordinate parameters.

Claim 19 (Currently amended): A method according to Claim 18 wherein the step of performing a calculation further comprises:

determining distances between the first and second co-ordinate parameters as an actual distance that can be traversed to connect the first and second co-ordinate parameters.

Claim 20 (Previously presented): A method according to Claim 19 wherein the determination of actual distance includes at least one permissible travel route between the pair of points on the map.
